

What is DRI16804?

A study to determine the effects and safety of an investigational drug in people who have ulcerative colitis (UC)

Looking for participants with:

- ✓ UC diagnosed for ≥ 3 months with active disease (rectal bleeding and diarrhea).
- ✓ Either not on treatment or on treatment that is not working well.
- ✓ Adult woman who has gone through menopause or a man

Participation includes:

- ✓ Investigational drug or placebo that is orally administered (as capsules 2 times per day).
- ✓ 12 onsite visits including 3 endoscopies during a 58 week study period (including 52 weeks of treatment).
- ✓ Completing a daily diary of symptoms during the study.
- ✓ Monitoring for side effects throughout the study.
